Pain point of Hong Kong Public Hospitals

Statistics :

Waiting time display is capped at 8 hours amid a large number of patients waiting for a long time are being treated in the A&E Department. Patients with minor illnesses can consider seeking alternative medical services from private clinics (as listed in Primary Care Directory or Hong Kong Doctors Homepage).

HKC Solution 1

We provide UWB tracking system for the prevention of wandering incidents of patients in hospital waiting area.

Accomplish by

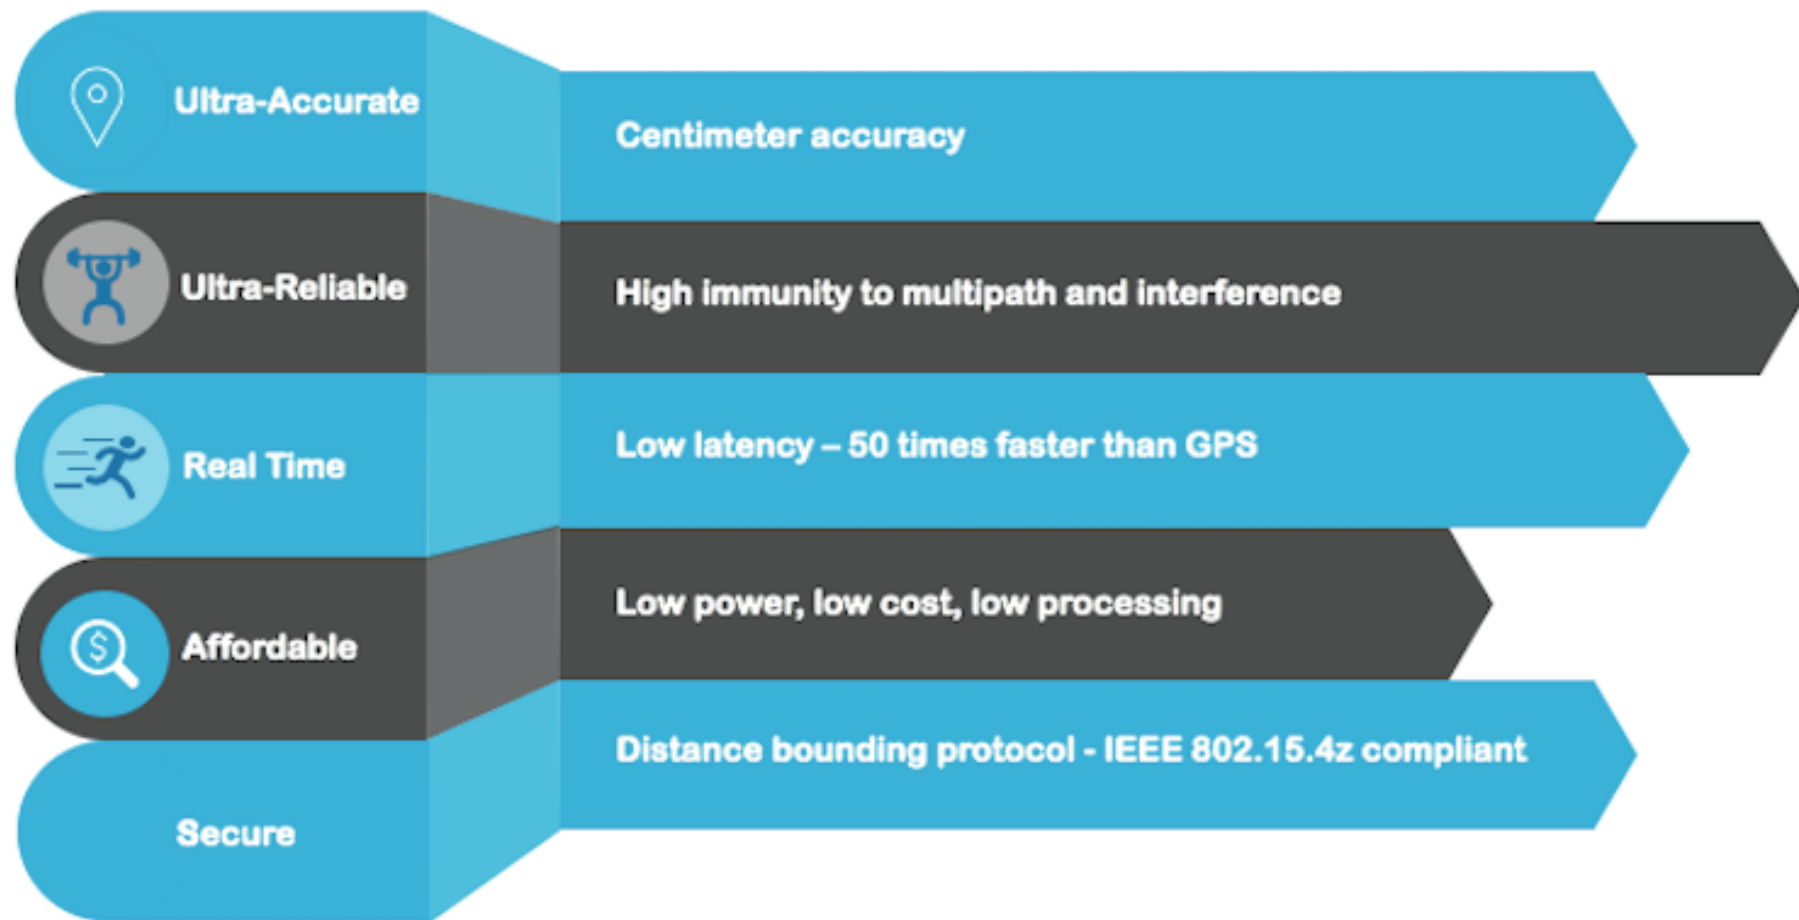

1. UWB Tag
2. Instant alarm signal received by on duty hospital officials

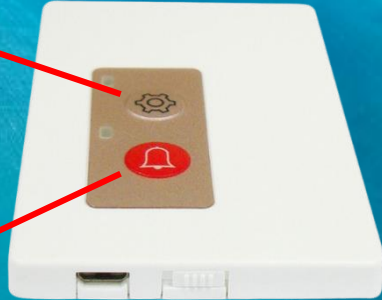

What is Ultra Wide Band?

A technology designed specifically to deliver micro-location and secure communication

Reset Button

SOS
Emergency
Button

UWB Tag

UWB Anchors

UWB anchors emit short-duration, high-frequency pulses of radio waves that can be used to measure the time of flight (ToF) of signals between the anchors and UWB tags

HKC UWB Tag and UWB Anchors (For Precise Positioning)

- High precision to centimeter level Ultra Wideband (UWB)
- 3 Anchors for accurate triangulation of position
- Long battery life. Adjustable update frequency
- Panic button built into the tag
- Programming input buttons for advance application
- Real-time Location System (RTLS) Server with powerful API and features
- Applications include contact tracing, alarm location

System Architecture

1. Patients wear UWB tags adopting the Ultra wide-band technology
2. UWB Anchors are installed on the ceiling or surrounding walls in fixed locations up to 25 meters apart. The anchors can be powered via USB or PoE (Power Over Ethernet). For example, a 10000 mAh USB battery can power the anchor for 50-60 hours or so
3. At least 3 anchors are needed for a 25×25 space. The anchors synchronize their internal clock via Ethernet cable or WiFi and then listen for pings from UWB tags
4. Once synchronized, the “Real Time Location Server” (RTLS) will calculate the tags’ position based on time difference of signal arrival at the anchors (TDoA)

*****Emergency signals will immediate alert onsite hospital officials by APP if patients press the emergency call button**

HKC Solution 2 : BLUETOOTH BEACON PRECISE POSITIONING

HKG: 248

BLUETOOTH BEACON PRECISE POSITIONING

Wristband BLE Tag

BLE Gateway

- Zone-based Indoor positioning
- Very long battery life. Low battery indicator
- Waterproof, high quality silicone

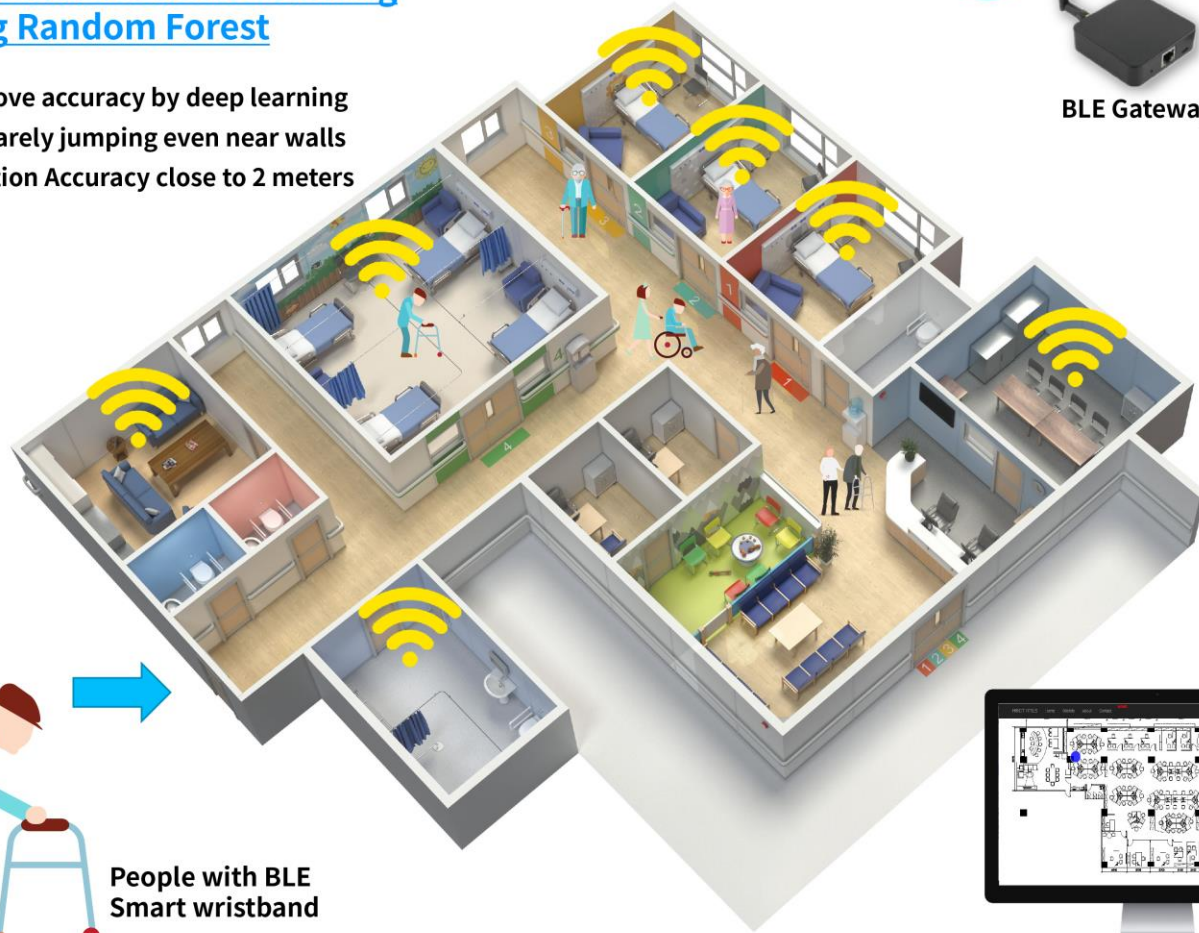

AI assisted Machine Learning using Random Forest

- * Improve accuracy by deep learning
- * It is rarely jumping even near walls
- * Location Accuracy close to 2 meters

1

People with BLE Smart wristband

2

BLE Gateway

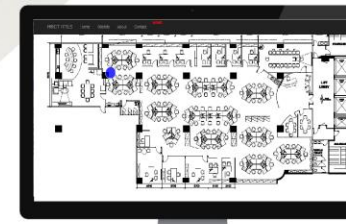

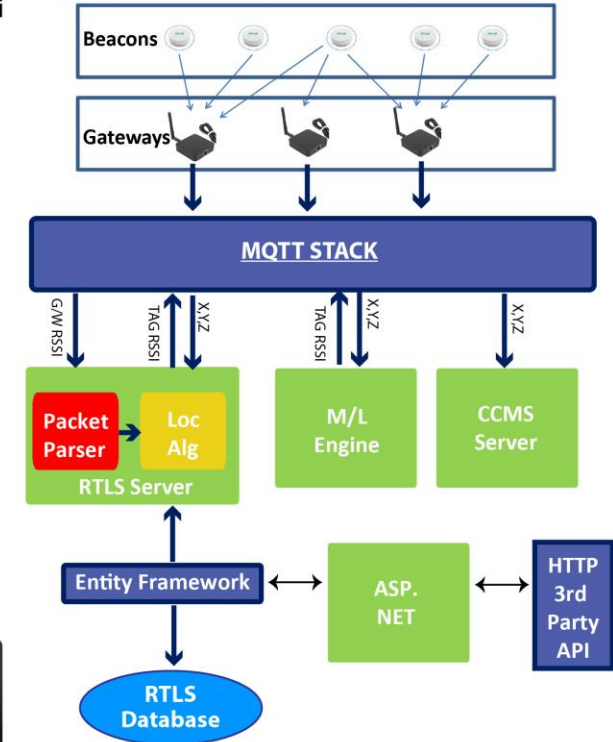

Wi-fi

3

Server

RTLS System

A relief of the shortage of
manpower of on site officials

Remote instant emergency
alerts from PC / tablet / mobile

Easy operation by on site officials

UWB tags or wristbands are easy and
fast to wear by children and elderly

We provide on site installation and
professional after sales service

Benefits & Impact

The deployment of **UWB or Bluetooth Location Tracking Solution** will improve the overall safety of public hospitals

Reference Cases

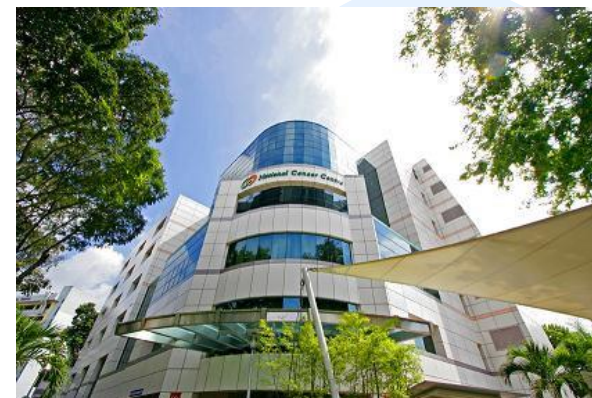

The Tanner Hill

The first non-subsidised quality elderly housing project in Hong Kong

Blissful Place

Project of the “lease-for-life” Senior Citizen Residences Scheme

National Cancer Centre Singapore

Real Time Location Tracking System
