

SMART UNIFORM DISPENSER

The Smart Uniform Dispenser can be applied in public institutions such as hospitals or hotels. It is an automated device installed in public areas for the convenience of staff in obtaining and replacing uniforms. It consists of multiple storage compartments, each containing uniforms of different sizes and types. Staff can operate the device by scanning their work identification through an identity verification method. The system automatically recognizes their needs and dispenses the corresponding uniforms. The Dispenser improves efficiency, saves time, and ensures that staff can easily obtain the required uniforms. It helps with accurate management and tracking of uniform usage, enhancing the effectiveness of uniform management.

1

Scan the employee ID to confirm identity

2

The system will automatically recognize and dispense the corresponding uniform

3

Simply collect the uniform and leave

Benefits

- **Automated Dispensing:** Utilizing automation technology, it can automatically identify the identity of the staff and dispense the corresponding uniforms. This saves manpower, improves dispensing efficiency, and makes the uniform distribution process faster and more convenient.
- **Multi-functional Storage Compartments:** Equipped with multiple storage compartments, each compartment can accommodate uniforms of different sizes and types. This satisfies the needs of different staff members and provides a diverse selection of uniforms.
- **Safety and Reliability:** Equipped with security measures such as fingerprint recognition, password locks, etc., to ensure that only authorized personnel can collect uniforms, preventing misuse or damage to the machine.
- **Recording and Tracking Functionality:** It has recording and tracking capabilities to keep track of each staff member's uniform collection, including the date, time, and types of uniforms collected. This helps hospital management better understand uniform usage, inventory management, and replenishment.
- **User-Friendly Interface:** Designed with a simple and intuitive interface. Staff members can easily collect the required uniforms by following the on-screen prompts, without the need for additional assistance or guidance.
- **Customization Options:** It can be customized according to specific requirements, including machine size, number and configuration of storage compartments, authentication methods, etc. This ensures the maximum fulfillment of the hospital's needs and requirements.
