RFID OFFERS
RELIABLE TRACK-
AND-TRACE IN TOUGH
ENVIRONMENTS. THIS
TECHNOLOGY CAN
EASILY TRACK AND
PROVIDE REAL-TIME
DATA ABOUT
INVENTORY AND
PRODUCT LOCATION.

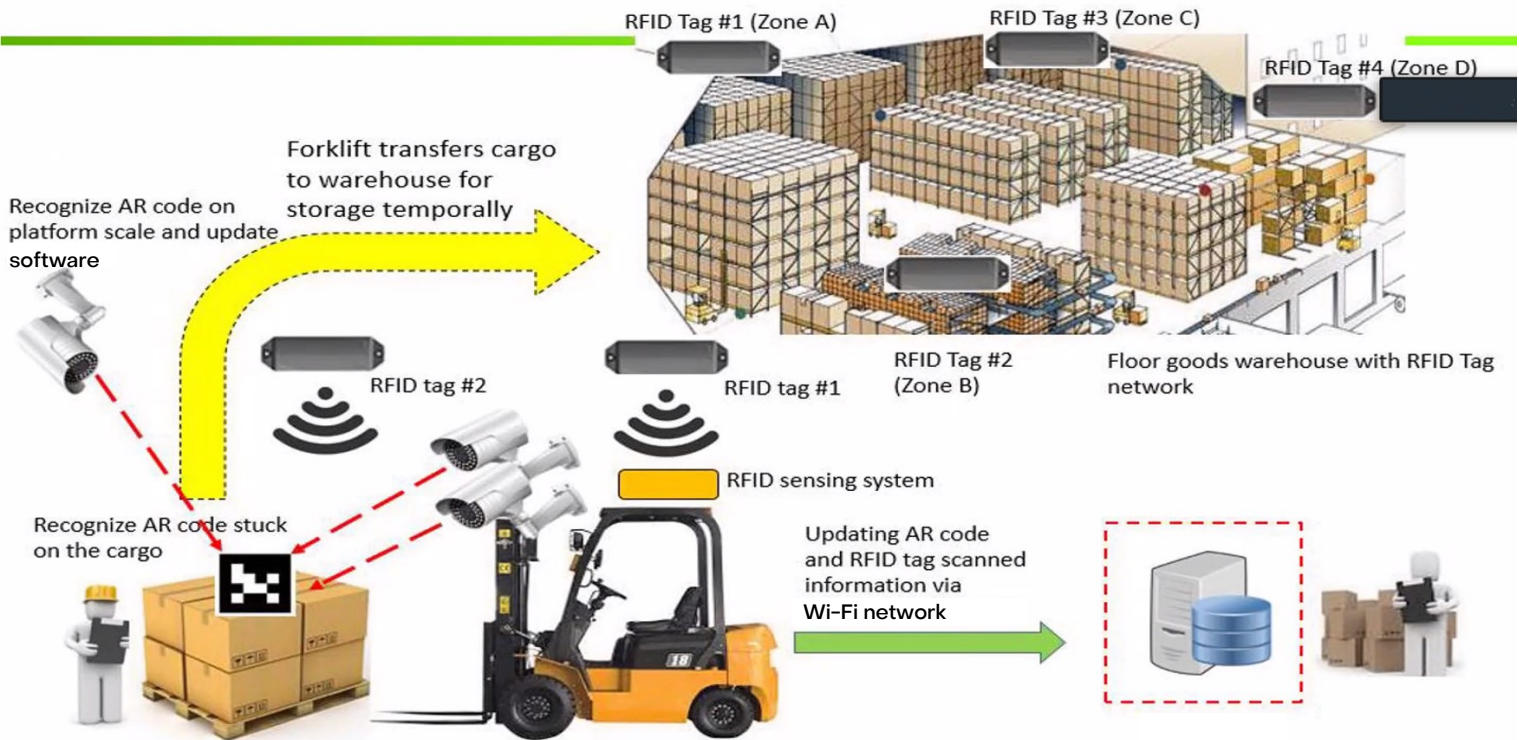

RFID is ideal for the processes of warehouses or distribution centres, as the functions performed in them are always related to products and goods that have tags with necessary information. With this technology it will be simpler to monitor goods and know their origin and destination. With our commitment in the development of Smart Asset Management Solution (SpotTrack) over the years, HKC has been awarded to design, supply, deliver and install the RFID tags and location devices for one Hong Kong logistic company.
